CHOICE

In Development

Molly vs The Machines unveils the tragic story behind a teenager driven to take her life by machines that were built to control people for profit. It exposes a global system of power that reaches into our children's bedrooms from the boardrooms of today's most powerful companies. The film uses the Coroner's inquest into the death of Molly Russell as a portal into understanding the two decade rise to power of Surveillance Capitalism and its threat to democracy.

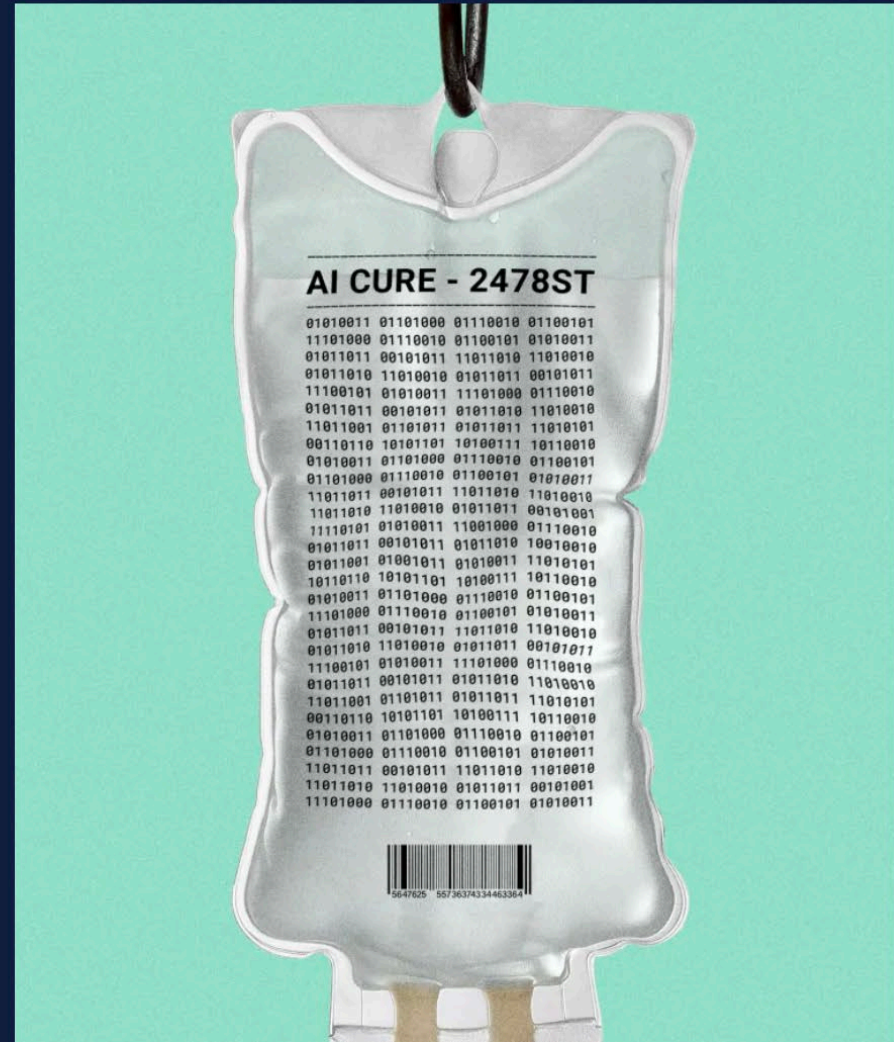

ARTIFICIAL INTELLIGENCE

AI is dreaming up drugs that no one has ever seen. Now we've got to see if they work.

AI automation throughout the drug development pipeline is opening up the possibility of faster, cheaper pharmaceuticals.

An iceberg floating in a dark blue ocean. The tip of the iceberg is above the water line and is labeled 'Statistical/ Computational Biases'. The much larger part of the iceberg is submerged below the water line and is divided into two sections: the upper submerged part is labeled 'Human Biases' and the lower submerged part is labeled 'Systemic Biases'.

Systemic Biases

Report of the Special Rapporteur on extreme poverty and human rights

Summary

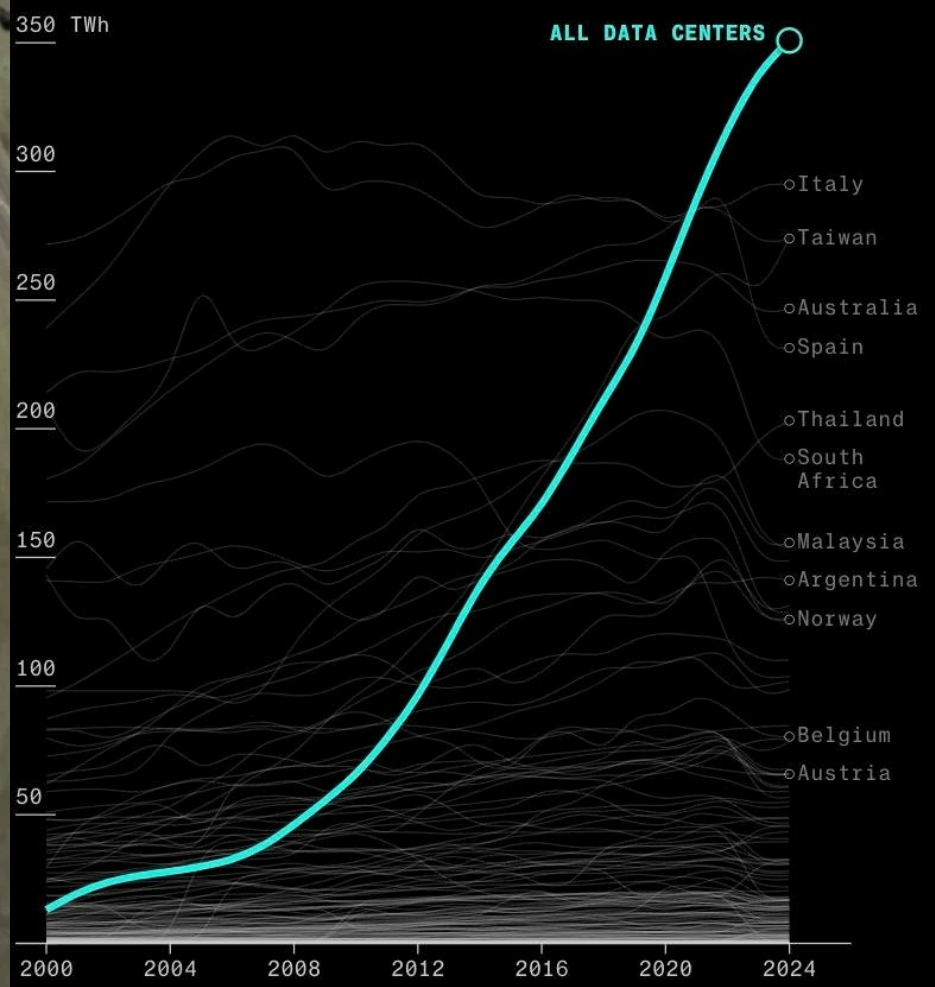

The digital welfare state is either already a reality or emerging in many countries across the globe. In these states, systems of social protection and assistance are increasingly driven by digital data and technologies that are used to automate, predict, identify, surveil, detect, target and punish. In the present report, the irresistible attractions for Governments to move in this direction are acknowledged, but the grave risk of stumbling, zombie-like, into a digital welfare dystopia is highlighted. It is argued that big technology companies (frequently referred to as “big tech”) operate in an almost human rights-free zone, and that this is especially problematic when the private sector is taking a leading role in designing, constructing and even operating significant parts of the digital welfare state. It is recommended in the report that, instead of obsessing about fraud, cost savings, sanctions, and market-driven definitions of efficiency, the starting point should be on how welfare budgets could be transformed through technology to ensure a higher standard of living for the vulnerable and disadvantaged.

AI IS ALREADY WREAKING HAVOC ON GLOBAL POWER SYSTEMS

Altogether, data centers use more electricity than most countries

Only 16 nations, including the US and China, consume more

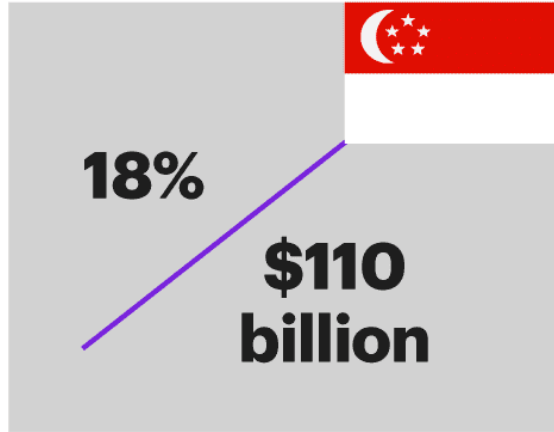

Sources: Bloomberg analysis of BloombergNEF and DC Byte data
Note: Data center energy consumption through Q1 2024. National energy consumption levels are actual through 2022 and projected for 2023 and 2024.

Flood of AI and deepfake images underline threat to women, sexual minorities in South Asia

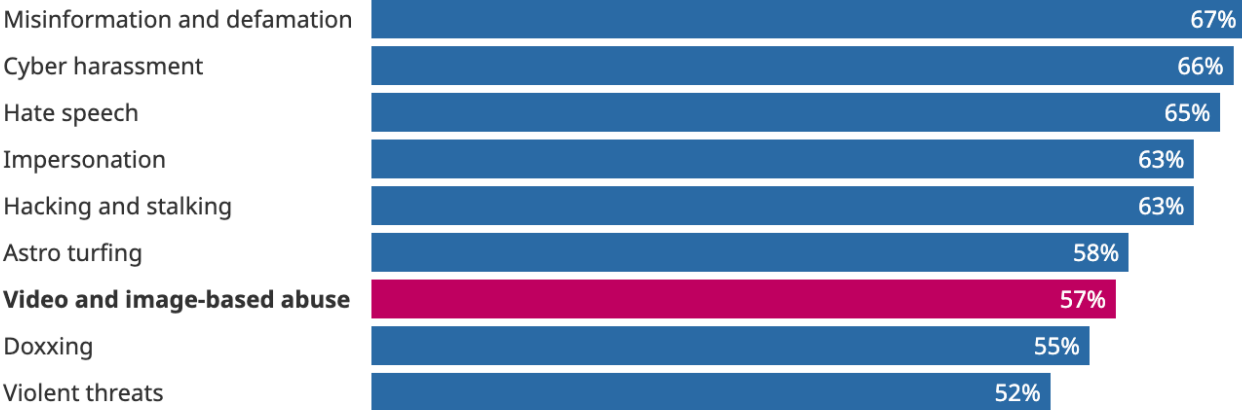

The issue is particularly challenging in conservative societies where women have long been harassed online and abuse has gone largely unpunished, say experts.
